NetOp[®] Instruct

EDUCATE. COLLABORATE. UPDATE.

WITHOUT PEOPLE, WHAT'S LEFT?

How do you optimize your training efforts?

If people are the defining aspect of your company, their skills and know-how constitute your core assets. But is the best way to share and nurture know-how really to move people between offices and countries? And is the optimal choice for developing practical skills really to train employees in a way where instructor and attendee can't collaborate during training?

How do you share knowledge and enjoy teamwork more efficiently?

In training and project work it is a fact that great minds think alike. But how do you get them together when you need to? Traveling is often inefficient and if you need to look at documents during a conference call, it's impossible to be sure you're all on the same page. And even if you all know what you're talking about, true collaboration is often elusive if it's impossible to do actual work on shared documents.

How do you get information across and align your organization instantly?

Most conventional internal communication channels require action on the part of the receiver, making you unable to know for sure if your message gets through. Sure, you can distribute information or post messages on the intranet or by sending an email, but you can't expect an immediate response when your message fades away somewhere on your server or disappears in a crowded inbox.

BEST IN CLASS COMPUTER-BASED TRAINING

With the NetOp Instruct you get a world-class software solution for computer based training, that will help your company nurture its most valuable asset:

People.

COLLABORATE.

**Join the team
without leaving your chair**

In addition to training, NetOp Instruct is ideal for collaboration across the network. Forget the cost and the hassle of moving around – or just add a new dimension to your cramped conference calls with unique features for sharing thoughts, sharing information and collaborating on shared or even individual team members' documents all together.

Benefits:

- Create and conduct networked teamwork
- Share thoughts, share know-how, share actual files
- Broadcast individual screens to other team members
- Assign your team members' individual access rights to your workstation

EDUCATE.

**Offer individual training
– with multiple users**

NetOp Instruct gives you a complete package for computer based training that helps the instructor all the way with preparing, training, testing, and evaluating attendees. With a powerful and userfriendly interface, it offers a complete and convenient solution and simply gives each attendee a front seat.

Benefits:

- Prepare, conduct and control class
- Create, manage and score assignments
- Share screens – and 'pass the chalk'
- Integration with interactive whiteboards
- Live chat for individual support
- Value-for-money – much more than e.g. conventional AV solutions will ever offer

UPDATE.

**Networked broadcasting
– gets your message across.
Instantly!**

With a functionality usually found only in dedicated broadcasting and display systems, NetOp Instruct enables you to actively push information where it's needed, when it's needed. The functionality simply uses your network to transmit information to dedicated screens - or just to individual workstations – and gets the message across.

Benefits:

- Use an existing network to broadcast data, media files, and announcements
- Push-based – you decide who gets what, when
- Keep e.g. sales up with latest figures or keep production up with latest schedules

NetOp Instruct brings a complete, computerized training solution to the corporate network. Broadcast your screen, let attendees share screens to collaborate on common documents, lend a hand where and when it's needed, and create and perform regular tests with immediate individual feedback.

Educate

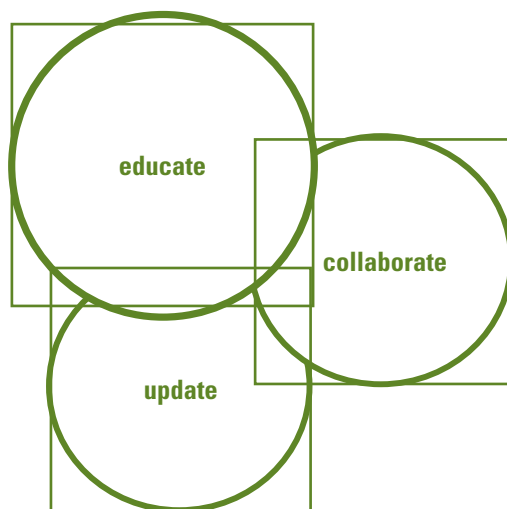

Enhance your computer lab with interactive training and full attendee participation.

Collaborate

Teamwork becomes smoother and much more effective when every member can share their thoughts and their files from a distance.

Update

Use existing network to broadcast information to dedicated screens or employees' workstations.
